

Product Change Announcement

Product Name:	FXO Module Rev.04	Date:	25-Dec-2012
PID:	XR0025	Number of Pages:	1
First S/N:	X1050650	Assembly no.	PA0921

Hardware Description

The “FXO Module” is used to connect an Asterisk PBX to analog trunks. The new FXO Module, starting with S/N X1050650, is compatible with the following versions of the main board: PA0431, PA079X, PA091X.

Software Requirements

The new FXO Module is backwards compatible and is supported by all DAHDI versions.

Changes

- Better protection against lightning and spikes (ESD).
- The new FXO module is easily differentiated from the existing modules, as it uses a red PCB (printed circuit board) as opposed to the standard green.

Notes

The new FXO module is not compatible with the Analog Lines Failover kit (P/N XR0129), since the connector on the FXO module has changed.
